

Specifics

I have liquid paint, do you accept liquid paint?

Yes, as long as it has not been mixed with anything and is standard house paint. We do not accept paint with lead or mercury.

Can I put my paint in the trash can?

If it contains any liquid, no. If it is dry contact your garbage company for specific requirements.

Can I mix all my paint in one big bucket for you?

No, we cannot accept paint once it has been mixed with anything including other paint.

How can I tell if my paint is Latex or Oil / Alkyd based?

Paints are generally referred to as being oil based or water based. If you have trouble determining the type of paint you have, check it's method for cleanup. Soap & Water indicates that it's water based; whereas mineral spirits or paint thinner indicate that it is oil based.

Also look at the warning label on the container. If it states anything like "Flammable, Combustible, Keep away from flames, Vapors may ignite, ..." then this is a solvent based paint.

If you are still having trouble determining which type of paint that you have, look for an ingredient list. Typically it will say water or some type of oil. (i.e. Linseed Oil) Alkyd is oil based.

Behr does have a product that looks like it is oil based, it says, "Oil Penetrating Formula" and then right below it says, "Easy Water Cleanup" this wood stain is a water soluble formula
